

WHICH HOME HEATING OPTION IS RIGHT FOR YOUR FAMILY?

Whether your family has a modern home or a traditional Dales cottage – home heating choices have never been so extensive ... or so complicated.

Financial choices and environmental choices merge together to present an alarming and confusing picture. There is little wonder that many people simply opt for a basic replacement to their old boiler and only afterwards question whether they made the wisest choice.

To help focus minds, we have produced a short checklist:

- ✓ Do you want low initial cost or longer term savings
- ✓ Are you 'on-grid' or 'off grid'
- ✓ Have you researched regulations that cover all new installations, including Log Stoves
- ✓ Are environmental concerns important to your family
- ✓ Did you know that multi-energy systems and heat storage are now a reality
- ✓ Are you more concerned with aesthetics or efficiency

Ashburn Stoves and Heating have the Knowledge, Expertise and Experience, together with local knowledge of the planning systems to guide you through your decision making.

The options include

Multi Energy Heat Stores

Heat stores are the key to your decision making. Multi energy systems can avoid the need to replace an old boiler ... it remains an occasional back up to a system which uses the most appropriate power source for your families circumstances, and helps protect their future environment.

Solar Thermal

Solar panels can be coupled into multi energy heat store system, so that the sun's heat can be stored during the day for use at night. Flush fitting panels can be used on old and historic properties without compromising aesthetics.

Log Stoves and Boiler Stoves

Ashburn's showroom displays a range of Log Stoves, Multi Fuel Stoves and Boiler Stoves, including the Romotop range with stone panels and tops which retain the heat and are an uncompromising artistic statement for any home.

Biomass

Ashburn install and support Biomass heating systems across England, Scotland and Wales. Our experience and expertise is valued by home owners, businesses and housing associations.

Heat Pumps

Our CTC Regulus heat pumps are industry leaders, confidently offering a five year warranty. Our heat pumps are monitored by the manufacturers engineers via the internet, to ensure you achieve optimum efficiency at all times. Combining a heat pump with solar PV on-site battery storage is an alternative to grid feed-in options.

Oil and Gas

Ashburn are experienced **OFTEC Oil specialists** – if you are off-grid and need a reliable, economical system.

We are **GAS SAFE** - installing and servicing modern Gas Boiler Systems.

Ashburn

Ashburn Stoves and Heating

A heating engineering company offering the full range of heating options, from Log Stoves through traditional Oil and Gas systems to cutting edge renewable systems powered by Heat Pumps, Solar or

Biomass technologies.
